COUNTY BOROUGH OF SOUTHAMPTON.

ANNUAL REPORT OF MEDICAL OFFICER OF HEALTH.

To the Mayor, Aldermen, and Councillors.

MR. MAYOR AND GENTLEMEN,

I have the honour to submit for your information, in accordance with the order of the Local Government Board, my Annual Report upon the condition of the public health, and a record of the administrative work carried out by the Health Department for the year 1915, together with the vital statistics of the Borough. A summary of the work done and action taken under the Factory and Workshops Act, 1907, the Midwives' Act, 1902, and the Housing, Town Planning, etc., Act, 1909, is also included in the Report.

Summaries are also included in the Report of the general public health work carried out in the Borough, and the action taken in respect of infectious disease and the measures adopted for the prevention and control of Tuberculosis.

The health of the Borough was satisfactory during the year.

A large amount of work was carried out during the year for the Military Authorities, chiefly in connection with the treatment of cases of infectious disease in the Isolation Hospital from neighbouring camps and of cases landed in the Port. Much disinfection was also carried out.

I am, Mr. Mayor and Gentlemen,
Your obedient Servant

R. E. LAUDER,

Medical Officer of Health.

REPORT.

STATISTICAL SUMMARY FOR THE COUNTY BOROUGH OF SOUTHAMPTON.

Acreage	• • • • •		4,004

POPULATION.

Owing to the continuance of the War the usual method of estimating the local population on the preceding intercensal increase has become unreliable and misleading. The majority of men of military age have been drafted to military training centres or sent abroad, and there has been a large migration both of the male and female population from one area to another.

Under these circumstances the Registrar-General has utilised the information obtained in connection with the National Registration Act, 1915, to revise the estimated population of the various districts.

These estimates based on the National Register reter only to the civil population, and exclude the military population in each district.

The following is the method by which the estimates of civil population have been derived from the National Register returns:

The ratio of the total population less the males aged 15—65 years to the number of females aged 15 to 65 years at the date of the census was calculated for each administrative area, and this ratio was applied to the number of females on the National Register; the resulting product plus the number of males aged 15 to 65 years on the National Register was taken to be the number of the civil population of the district. Small adjustments were necessary for the population in Institutions and also in order to make the sum of the estimates for the several districts equal to the estimate for the country as a whole made on the same basis.

The estimated civil population of Southampton based on this method gives a total of 117,349 at the date of taking the National Register, 14th August, 1915.

This total is 1663 below that of the census of 1911 (119,012), and 8,151 less than the total population estimated in the usual method to the middle of 1915, namely 125,500.

The population used for the calculation of birth rates is that estimated to the middle of 1914, namely 123,948.

Notwithstanding the unsettled conditions that have existed, the number of unoccupied houses in the Borough has decreased compared with the previous year. An enumeration is made by the Health Department at the end of each year of the unoccupied dwelling-houses in the Borough. The total number unoccupied was returned as 267, which is a decrease of 134 compared with the year 1914.

Of the 267 houses returned as vacant in 1915, only 34 were under a rental of £26 a year, the remainder (233) being of an estimated rental of £26 or over.

METEOROLOGY.

The weather conditions experienced in 1915 were generally wet and cool, with sunny, dry intervals.

January and February were wet and mild. March and April were dry and cool. July was unsettled and wet, and December, as in the previous year, was very wet and mild, 8.1 inches of rain being recorded. (See Meteorological Table, page 108).

The total rainfall during the year was 41.7 inches, being nearly 8 inches more than the average of the previous 100 years.

The mean temperature, 50.4 degrees, was 0.7 below the average.

The sunshine recorded amounted to 1,629 hours, being less than the average. The sunniest month was May, with 229 hours.

In the annual summary for the year 1915 issued by the Meteorological Office, the mean temperature of towns on the South Coast is given as:—

Penzance	• • •	52.3	Brighton		50.3
Plymouth		50.8	Eastbourne		50.I
Portsmouth		50.8	Worthing		50.0
Falmouth		50.5	Bournemouth	• • •	49.6
Southampton		50.4	Dover		48.9

BIRTHS.

The birth-rate for the year amounted to 21.91 per 1,000 of the population. This is a decrease of 1.96 of the rate recorded last year, and is 2.97 below the average of the previous 10 years.

The number of births registered in the Borough amounted to 2,707 during the year, being a decrease of 242 compared with 1914. The largest decrease occurred in Portswood Ward, the birth-rate being 5.7 below that of 1914. The decreases in the birth-rate in the old civil parishes was: Twn 1.5, Portswood 4.1, Shirley 1.4.

The highest birth-rates recorded were in Shirley (29.5) and Northam (27.8), and the lowest Banister (14.3) and Bevois (17.6).

Of the 2,707 births registered, 1,368 were males and 1,339 females, the proportion of males to females being 1,022 males to every 1,000 females. The following is the proportion in each of the preceding 10 years.

Year.	Propo to Fe	ortion of emale Bir	Male ths.		Year.		portion of M Female Birt	
1905	• • •	992		• • •	1910		1120	
1906	• • •	1054			1911		1008	
1907		1000	• • •	• • •	1912	• • •	1059	
1908	• • •	1072			1913		1023	
1909		1059		• • •	1914		1034	

The average for the 10 years being 1050, and the average for England and Wales 1039.

The illegitimate births registered amounted to 116 compared with 104 in the previous year.

This number is equal to a rate of 0.94 per 1,000 of the population, and to 43 illegitimate births to every 1,000 births registered. The average for England and Wales for three years, 1911—1913, was 1.0 and 43 respectively.

DEATHS.

The death-rate of the Borough for the year amounted to 14.78 per 1,000 of the population. This rate is calculated on the estimated civil population (117,349) as described under the heading "Population," and does not include the deaths of soldiers. This death-rate is 0.89 higher than in the preceding year, which is accounted for by being calculated on a lower population than in 1914.

There was an increased mortality from influenza and bronchitis, owing to an unusual prevalence of these diseases in the early spring, and an increase in the number of deaths of children between 1 and 5 years of age from measles and whooping cough.

In comparing the death-rate with other towns and with England and Wales the age and sex constitution of the population has to be taken into account, and the Registrar-General supplies to each of the large towns a factor by which the general death-rate should be multiplied to make it comparable with that of England and Wales. This gives a corrected death-rate for each town of what it would be if the age and sex distribution of the population were the same as that of England and Wales. The factor for correction for South-ampton is 0.9574, which gives a death-rate corrected for age and sex distribution of 14.15.

The statistics for the year 1915 relate to the 52 weeks ended 1st January, 1916. During this period 1,830 deaths were registered in the Borough, being an increase of 38 over the total registered in 1915.

Of this total 154 were deaths of non-residents, including 67 deaths of soldiers in the various military hospitals and Camps in the Borough. Fifty-two deaths of residents of the Borough occurred in other Districts, giving a corrected total of deaths belonging to the Borough of 1,728, which is 12 higher than in the preceding year.

As in the previous year the death-rate in the Municipal Wards was lowest in St. Denys Ward and highest in Town Ward.

The death-rate in each of the Municipal Wards of the Borough per 1,000 of the population was:—

St. Denys	• • •	II.I	Shirley	• • •	14.5
Freemantle		12.7	Newtown		15.5
Portswood		13.3	Trinity		15.6
Banister	• • •	13.6	Northam		16.5
All Saints	• • •	13.7	St. Mary's		17.4
Bevois		13.7	Town		18.1
Millbrook		13.7			

The causes of death in each of the Municipal Wards are shown in Table 9 (page 99). Other statistics relating to the Municipal Wards are given in a table on page 10.

The death-rate in each of the old civil parishes of the Borough was:—

Town	 • • •	 	16.5
Portswood			
Shirley			

The Borough is now united into one Civil Parish, and is divided into two registration districts—east and west—the dividing line being the main street from the Town Quay to the top of the Common.

The death-rate for England and Wales during the year 1915 was 15.1, and for the 96 great towns, 15.6 per 1,000 of the population.

Of the 1,728 deaths belonging to the Borough 919 were males and 809 females, giving a proportion of 1,136 male deaths to every 1,000 females.

Excluding deaths of soldiers, a total of 1,763 deaths were registered in the Borough, 569 of which occurred in public institutions, and is equal to 32.3 per cent. of the total deaths. The percentage in England and Wales was 22.3, and in the 96 large towns 28.8. The institutions in which the deaths occurred were: Isolation Hospital, 57; Royal South Hants and Southampton Hospital, 160; Parish Infirmary, 269; Workhouse, 56; Shirley Children's Hospital, 6; Free Eve Hospital, 1; Nursing Institutions, 20. Forty-one deaths also occurred in Military Hospitals in the Borough.

TABLE A.

Showing Estimated Population, Birth Rates, Infantile Mortality, and Death Rates in each of the Municipal Wards for the year 1915, together with the Averages for the four years 1911-1914.

INFANTILE MORTALITY.

The deaths of infants under one year of age recorded during the year amounted to 237, which is equal to a rate of 87.6 per 1,000 births registered during the same period.

This rate, 87.6, is lower than that of the previous year, which was 89.9. In 1913 the rate was 81.5, and in 1912 84.4.

The infantile mortality rate in 1915 in England and Wales was 110, and in the 96 great towns (including London), 116.

The number of deaths of male infants amounted to 132, compared with 105 females. The sex mortality of infants under one year of age per 1,000 births of each sex for the past five years is shown in the following table:—

	Males.	Females.	Both Sexes.
1911	 156.6	112.8	134.8
1912	 92.2	76.3	84.4
1913	 89.5	73.2	81.5
1914	 IO2.I	77.2	89.9
1915	 96.5	78.4	87.6

Fifty-four of the deaths occurred during the first week of life, which is equal to 22.8 per cent. of the total recorded. In the previous year the percentage was 26.5.

The causes which were responsible for the largest number of deaths of infants under one year of age during the last five years are:—

Diarrhœa and Enteritis Premature Birth		1912. 28 55	1913. 30 64	1914 44 69	1915. 35 56
Atrophy, Debility, and Maramus Bronchitis and Pneumonia Whooping Cough	56	42	10	34 33 10	15 48 15

The deaths of illegitimate infants numbered 20, which, calculated upon the number of illegitimate births registered during the same period is equal to an infantile mortality rate of 172.4, compared with 83.8 for legitimate infants.

Similar rates for seven years are given for comparison:—

			Infa Infa	egitima ant Mor Rate.	te tality	Illegitimate Infant Mortality Rate.
1909	• • •	• • •	• • •	99	• • •	311
1910	• • •	• • •	• • •	75	• • •	164
1911	• • •	• • •	• • •	128		366
1912	• • •		• • •	79	• • •	237
1913	• • •	• • •		77	• • •	191
1914	• • •	• • •	• • •	85	•••	221
1915		• • •	• • •	84	• • •	172

The Infantile Mortality in the old Civil Parishes of the Borough per 1,000 births registered was: Town proper, 97.6; Portswood and Bitterne Park, 73.0; Shirley, Freemantle, and Millbrook, 77.8, the rate in Town proper showing a considerable increase over the preceding year.

The lowest infant mortality rate in the Municipal Wards was, as in the previous year, lowest in Newtown Ward, with a rate of 46.4, and the highest in St. Mary's Ward, with 135.9 Banister Ward had the unusually high rate of 128.4.

The rates in the Municipal Wards are given below, the rate in the preceding year being shown for comparison:—

Ward.			1915.		1914.
Newtown	• • •	• • •	46.4	• • •	33.9
St. Denys		• • •	53.2	• • •	72.5

St. Mary's			135.9		120.1

The Notification of Births Act came into operation in the Borough on the 9th March, 1908. This Act requires any person in attendance upon the mother within six hours after the time of birth, to notify the Medical Officer of Health of such birth in writing within thirty-six hours of the birth having occurred.

This Act was passed in order that Health Authorities might obtain immediate notice of the occurrence of a birth, thus making it possible for Health Visitors to give early instruction and advice to the mother as to the feeding and treatment of the child. Under the Registration Act, which allows a limit of six weeks within which a birth may be registered, it frequently occurs that registration of a birth is only obtained after death has taken place. During the year 106 deaths occurred among infants under six weeks of age, being 45 per cent. of all those that occurred under one year of age.

The number of notifications received during the year under the Act amounted to 2,283, which is 32 less than in the previous year, and 199 less than in 1913.

The total notified is equal to a percentage of \$4.8 of the births registered during the same period, the percentage being higher than in previous years.

The numbers notified and percentage during the last five years is shown in the following table:—

	1911.	1912.	1913.	1914.	1915.
Notified by—					
		289			240
Midwives	1,727	1,790	1,836	1,733	1,880
Other persons present in the house at time					
of birth	400	490	322	261	163
	2,446	2,569	2,492	2,315	2,283
Percentage to births registered during the					
same period	85.9	91.1	84.3	78.5	84.8

All births that are notified in the industrial districts of the Borough are investigated by Health Visitors, and advice and instruction are given on the management of infants. These visits are welcomed, and they are repeated, where necessary, for several months after the birth of the child.

The number of births visited by the Health Visitor during amounted to 1069 primary visits and 2,901 re-visits.

Information was also obtained as to the method of feeding of 2,241 infants born during the year; of whom 1873 were stated to be fed by the breast alone, 60 by mixed feeding, and 308 by cows' milk, condensed milk, or patent foods.

The deaths of infants under one year of age amongst those as to whom information as to feeding was obtained were as follows:—

How fed.		Number	Deaths	Percentage
Breast	• • •	1,873	7 I	3.80
Other than Breast-fed		368	59	16.01

All premises visited in connection with the notification of Births Act were inspected, resulting in 361 sanitary defects or nuisances being remedied.

MATERNITY AND CHILD WELFARE.

During the year the Notification of Births (Extension) Act, 1915, was passed, making compulsory throughout the country the system of notification of births.

The Local Government Board also issued a circular suggesting the development of schemes for dealing with Maternity and Child Welfare, and arrangements for Ante-Natal, Natal, and Post-Natal Clinics.

The suggestions contained in their circular were set out in the last Annual Report and the lines upon which it would be necessary to develop these.

In any scheme that is adopted for dealing with Maternity and Child Welfare it is essential that all administrative measures, both Municipal and Voluntary, should be under the direction of and controlled by the Medical Officer of Health.

The chief difficulty that has to be overcome is the provision of a suitable building within easy reach of working-class homes, that will provide accommodation as a centre for:—

- 1. An Ante-Natal Clinic.
- 2. School for Mothers for systematic classes and infant consultation.
- 3. Baby Clinic and Infant Dispensary.
- 4. Clinic and Dispensary for children up to school age.
- 5. Beds where cases of difficult labour, and for cases where conditions likely to be dangerous to the mother, could be treated.

There will also probably be need for the establishment of a properly equipped and controlled central creche or day nursery, owing to the large increase in the industrial occupation of married women in the Borough since the outbreak of the War.

In order to carry out all the requirements of the circular it is necessary that a sufficient staff of Health Visitors should be appointed. The Local Government Board suggest that, as a rule, one Health Visitor should be allowed for not more than 500 births, on the assumption that the whole of her time is devoted to this work. The average number of births in Southampton is about 2,900 per annum; so that on this basis the number of Health Visitors in the Borough is not sufficient.

The Health Visitor during the year made several visits to the Vountary Babies' Welcome at the Trinity School and King Street.

Practical demonstrations on infant washing and dressing were given to the older girls at some of the Elementary Schools during the year.

MORTALITY FROM ZYMOTIC DISEASES.

The death-rate from diseases usually classified as the chief epidemic diseases, namely: Small Pox, Scarlet Fever, Diphtheria, Enteric Fever, Measles, Whooping Cough, and Diarrhæa and Enteritis, amounted to 1.33 per 1,000 of the population, which is higher than in the preceding year, when the rate was e.996.

The death-rate per 1,000 of the population from the diseases specified above for the past five years is shown in the following table:—

		1911	1912	1913	1914	1915
Small Pox		.000	.000	000	.000	.000

Poliomyelitis					_	I	2
Opthalmia Neonatorum					-	48	21
Pulmonary Tuberculosis			-	339	464	411	318
Other Forms of Tuberculo	osis	• • •			105	104	78
Total			643	912	1191	1454	1302

All cases of Pulmonary Tuberculosis were made compulsorily notifiable on the 1st January, 1912, other forms of Tuberculosis on the 1st February, 1913, and Opthalmia Neonatorum on 1st April, 1914.

Detailed information respecting Tuberculosis is given on pages 33 to 56.

The table which follows gives a comparison of the infectious sickness rates during the year 1915 in Southampton with the average for England, and for the County Boroughs of England per 1,000 of the population:—

	Sou	Co thampton.	unty Boroughs of England.	England.
Small Pox		0.00	0.00	0.00
Scarlet Fever		3.68	3.7I	3.53
Diphtheria		2.95	1.49	1.52
Enteric Fever		0.21	0.20	0.18
Puerperal Fever		0.04	0.08	0.06
Erysipelas		0.54	0.76	0.67
Cerebro-Spinal Fever		0.12	0.06	0.08
Poliomyelitis		0.02	0.01	0.01
•				
		7.56	6.31	6.05
			0	

There were 2,823 visits and re-visits made to houses in which infectious diseases occurred, and inquiries were made relative to the probable source of infection, and the isolation of the patient. Information was also given concerning the precautions necessary to be taken to prevent the spread of the disease.

In connection with school absentees, 1,307 visits were made where non-notifiable infectious diseases occurred.

Of the cases notified under the Infectious Disease Notification Act, 541 were removed to the Isolation Hospital for treatment.

Sanitary defects were found in 110 houses in which cases occurred.

Particulars respecting each disease are appended:—

SMALL POX.

No case of Small Pox occurred during the year in the Borough or Port.

SCARLET FEVER.

The number of cases of Scarlet Fever notified during the year among the civilian population amounted to 430 cases, being an increase of 86 cases compared with the total recorded in the previous year, and 253 more than in 1913.

The number of cases notified and deaths resulting from the disease for the past five years were:—

				Cases.	Deaths.	Percentage.
1907	• • •	• • •	• • •	165	2	I.2I
1908	• • •		• • •	536	4	0.75
1909	•••	• • •	• • •	424	5	I.47
1910	• • •	• • •		219	. 2	0.92
1 911	• • •	• • •		195	5	2.56
I 912	• • •	• • •	• • •	288	2	0.69
I 913	• • •	• • •	• • •	177	2	1.13
I 914	• • •	• • •	• • •	344	IO	2.91
1915	• • •			430	2	0.47

The disease was prevalent throughout the year, the Wards of St. Denys and Portswood being chiefly affected.

The disease generally was of a mild type, the case mortality being only 0.47 per cent., which is the lowest recorded for several years.

Two hundred and sixty-two of the cases notified were removed to the Isolation Hospital for treatment, being a percentage of 61.5 compared with 68.3 in the previous year, and 78.0 in 1913.

In addition to the cases admitted to the Isolation Hospital from the Borough, I case was admitted from the Port, 10 cases from neighbouring districts, and 65 military cases were also admitted for treatment.

Operations for the removal of tonsils and adenoids was performed on 6 cases, or 1.8 per cent. of the total number of cases admitted to Hospital (including cases admitted from other districts). The percentage last year was 5.4.

The number of cases admitted suffering with purulent nasal discharge amounted to 53. The number of cases suffering with purulent ear discharge was 16.

The methods of treatment and discharge which have been adopted at the Isolation Hospital since 1902 were again carried out during the year, no heed being taken of desquamation in regard to detention in Hospital, but particular attention being given to the condition of the respiratory passages, ears, etc., by special isolation and treatment.

Two "return" cases occurred during the year. The particulars of these cases are:—

- (1) M.H., age 7 years, was admitted on November 17th, 1914, suffering with Scarlet Fever and discharged January 4th, 1915. On January 10th the child's mother, D.H., and sister, C.H., age 4 years, were notified to be suffering from Scarlet Fever.
- (2) M.F., age 16 years, was admitted April 11th and discharged June 3rd. On June 10th her sister, D.F., age 17 years was notified to be suffering from Scarlet Fever.

The following table gives particulars of cases of Scarlet Fever notified in the Borough, showing the number treated in the Isolation Hospital, the period of detention and the number of "return" cases in each year:—

Year.	1	Cases notified.	Admitted to Hospital.	Average period in Hospital (days).	No. of "return" cases.	Cases treated at home.
1902	• • •	261	208	48	7	53
1903	• • •	427	353	34	7	74
1904	• • •	113	102	26.7	2	II
1905	• • •	140	123	29.3	2	17

1910	• • •	219	183	36.9	О	36
1911		195	171	34.0	О	24
1912	• • •	288	235	32.0	О	53
1913	• • •	177	136	34.0	4	41
1914	• • •	344	235	30.5	I	109
1915	• • •	430	26 2	32.3	2	168

DIPHTHERIA.

Cases of Diphtheria occurred with frequency throughout the earlier months of the year, but showed a marked decrease in the last three months of the year when compared with the two preceding years. The number of cases notified amounted to 346, which is a decrease of 104 compared with 1914, and 11 compared with 1913.

The Municipal Wards in which the cases were most prevalent were Freemantle 58 cases, Millbrook 56, and Shirley 40. The fewest number of cases were notified in Town Ward, 7 cases, and St. Mary's Ward, 7 cases.

Thirty-nine deaths were recorded, the same as in the previous year, 75 per cent. of the deaths occurring in the first half of the year. The case mortality was 11.27 per cent., the highest recorded since 1905.

The number of cases notified and deaths recorded during the past ten years are shown in the following table:—

				Cases.	Deaths.	Percentage.
1905	• • •	0 • 0	• • •	229	26	11.35
1906	• • •			262	24	9.16
1907	• • •	• • •		204	22	10.78
1908	• • •	• • •	0 0 +	248	16	6.45
1909	• • •	• • •		202	19	8.56
1910	• • •	• • •		208	16	7.69
1911	• • •	• • •	• • •	352	23	6.53
1912	• • •	• • •	• • •	192	19	9.90
1913	• • •	• • •	• • •	357	30	8.40
1914	• • •	•••	• • •	450	39	8.67
1915	• • •	• • •	• • •	346	39	11.27

Two hundred and twenty-one of the cases notified were admitted to the Isolation Hospital for treatment, which is equal to a percentage of 63.9 compared with 64.9 in 1914, and 62.7 in 1913.

In addition to the number specified above, I case among the crew of a vessel was admitted to the Isolation Hospital from the Port, 36 from neighbouring districts, and 92 military cases.

ENTERIO FEVER.

The cases of Enteric Fever notified in the Borough during the year amounted to 25. This is an increase of 2 cases compared with those notified in 1914, but is 4 less than the average for the preceding 5 years. The number of cases notified, and the deaths that occurred amongst cases notified in the Borough since 1901 are given in the following table:—

	cabio	•			,	Percentage of
				Cases.	Deaths.	Deaths amongst cases notified in the Borough.
1901	• • •	• • •	• • •	106	7	6.6
1902	• • •	• • •	•••	123	15	12.2
1903	• • •	• • •	• • •	148	19	12.8
1904	• • •	• • •	• • •	19	I	5.3
1905	• • •	• • •	• • •	34	8	23.5
1906	• • •	• • •	• • •	15	5	33.3
1907	• • •	• • •	• • •	21	4	19.0
1908	• • •	• • •	• • •	37	4	10.8
1909	. • • •	• • •	• • •	53	7	13.2
1910		• • •	• • •	55	9	16.4
1911	• • •	• • •	• • •	20	3	15.0
1912	• • •	• • •	• • •	13	3	23.1
1913	• • •	• • •	• • •	33	6	18.2
1914	• • •	• • •	• • •	23	. 4	17.4
1915	• • •	• • •	• • •	25	8	32.0

The above table does not include the deaths of persons who were landed in the Port suffering from Enteric Fever and who subsequently died from the disease in Hospitals in the Borough.

Of the cases notified during the year three were members of crews of vessels who had arrived at other Ports a few days prior to onset of illness, two of these arrived from South Africa and one from South America. One case arrived in the Port from the Dardanelles a few days before illness, and another case had been working on a Hospital ship.

One case notified was a girl who had been in contact with her sister who was suffering from Enteric Fever in Ireland; another case was that of a nurse who had been nursing a case of Enteric in a country district in Hampshire.

Of the remaining cases two had eaten shellfish shortly before illness, two had been in contact with a case of Enteric, and one returned home ill from Somerset.

In thirteen of the cases it was not possible to obtain any evidence as to the probable source of origin.

Fourteen of the cases notified in the Borough were admitted to the Isolation Hospital. Fourteen cases (including three cases of paratyphoid) which were landed in the Port and nine military cases were also admitted.

PUBLIC HEALTH (OPHTHALMIA NEONATORUM) REGULATIONS, 1914.

There was a marked decrease in the number of cases of Ophthalmia Neonatorum notified, the number of cases recorded being 21. The Regulations came into operation 1st April, 1914, and during the 9 months ended 31st December, 1914, 48 cases were notified. Of the 21 cases notified during 1915, 3 were certified by medical practitioners, 9 by midwives, and 9 from Free Eye Hospital.

in the Municipal Wards the following is the number of cases notified per 1,000 births registered: Town 3.7, St. Mary 14.0. Northam 12.4, Trinity 0, Newtown 0, All Saints 17.0, Bevois 6.9, Banister 9.2, Freemantle 27.6, Millbrook, 0, Shirley 0, Portswood 6.1, St. Denys 10.6, Borough 7.8.

CEREBRO-SPINAL FEVER.

Fourteen cases of Cerebro-Spinal Fever were notified during the year as occurring among the civil population of the Borough.

The Regulations making Cerebro-Spinal Fever compulsorily notifiable came into operation on the 1st September, and until the occurrence of the cases under review only one case had been notified in the Borough.

Nine of the cases notified proved fatal, giving a case mortality of notified cases of 69.2 per cent.

Each case was investigated thoroughly as to history of infection, but in only one case was there any evidence of the patient having been in contact with another case, nor could any connection with military cases be discovered.

Contacts were bacteriologically examined and kept under observation.

The particulars relating to each case are epitomized in the following table:—

ACUTE POLIOMYELITIS.

Two cases of acute poliomyelitis were notified during the year, particulars of which are as follows:—

F.K., female, aged 10 years, residing at Cross Street, was taken ill 7th November, 1914, and was taken by her mother, on January 19th, 1915, to the Royal South Hants and Southampton Hospital, where the disease was diagnosed as acute poliomyelitis, and she was treated there as an outpatient. Permanent paralysis of right arm, shoulder to elbow, and left leg.

C.J., male, aged I year 5 months, was taken ill September 15th, and was treated at the Children's Hospital, Shirley, and the Royal South Hants and Southampton Hospital, as an out-patient. The case was notified from the latter institution on September 26th. Permanent paralysis of left leg, knee to ankle.

MEASLES.

The deaths from Measles were above the average for the Borough, the number of deaths recorded (30) being 12 above the average for the previous 5 years. The disease was most prevalent in May and June, twelve deaths being registered in the latter month. The highest number of deaths occurred in St. Mary's and Northam Wards, the totals being 10 and 7 respectively.

WHOOPING COUCH.

The deaths from Whooping Cough were also above the average, the total recorded being 37, which is 20 above the average of the previous 5 years. The disease was very prevalent in the Shirley district in the early part of the year. Eleven deaths occurred in Shirley Ward and 6 in Millbrook Ward.

DIARRHŒA AND ENTERITIS.

The number of deaths from diseases classified by the Registrar-General under the above heading amounted to a total of 47, being a decrease of 14 over those recorded in the previous year. The average for the previous five years was 74.

The deaths classified by the Registrar-General under the above heading include the following diseases:—

	Under 2 years of age.	Aged 2 years and over.	Total.
Diarrhœa and Infective			
Enteritis	2 9	2	31
Enteritis	8	0	8
Gastro Enteritis	3	2	5
Dyspepsia (under 2			
years of age)			
Colitis		I	I
Duodenal Ulcer		I	I
Ulceration of intestines		I	I
	40	7	47

The death-rate from all diseases under the heading of Diarrhæa and Enteritis amounted to 0.40 per 1,000 of the population compared with 0.49 in 1914, and 0.44 in 1913. The deaths from Diarrhæa and Enteritis under 2 years of age was equal to a rate of 14.8 per 1,000 births, compared with 18.18 for England and Wales, and 24.48 for the 96 large towns.

The largest number of deaths occurred in the Northam, St. Mary, and Town Wards, the totals recorded being 10, 8, and 6 respectively.

MILITARY CASES OF INFECTIOUS DISEASE AND DEATHS OCCURRING IN THE BOROUGH DURING THE YEAR.

INFECTIOUS CASES.

The following notifications were received of cases occurring in Military Hospitals or Rest Camp in the Borough:—

TUBERCULOSIS.

The total number of deaths from all forms of Tuberculosis of persons classified as residents of the Borough amounted to 206, as follows:—

, , , , , , , , , , , , , , , , , , , ,				
				170
Tuberculosis Meningitis		• • •		14
Tuberculosis of the Peritoneum	n and	Intest	ines	14
,, Spine			• • •	4
Tubercular abscess of Axilla				I
Disseminated Tuberculosis				3

206

The total number of deaths recorded from all forms of the disease is 5 below that recorded in the previous year, pulmonary tuberculosis showing a decrease of 2 deaths, and other forms a decrease of 3.

The death-rate from pulmonary tuberculosis was equal to 1.45 per 1,000 of the population. This is 0.06 higher than in 1914, and is 0.16 higher than the average of 1.29 for the preceding 10 years.

The mortality among males was, as is usual in South-ampton, much higher than that of females, the death rates calculated on the estimated male and female population were 1.95 and 1.05 respectively.

The death-rate for 1915 is calculated on civil population as estimated by the Registrar-General.

DEATH-RATES FROM PULMONARY TUBERCULOSIS

SINCE 1901.

Record of Number of Patients under Dispensary Treatment during 1915:—

	Non- Pulmonary.
Number of cases under treatment on January 1st, 1915 196	3
New cases treated (i.e., the number of new dossiers commenced) 235	46
Cases transferred from Sanatorium 118	8
Cases transferred from Domiciliary treatment 3	
Cases transferred from General Supervision 29	3
Cases transferred to Sanatorium 122	8
Cases transferred to Domiciliary treatment 70	_
Cases lost sight of (including removals from the Borough) 49	
Cases who have finished treatment during the year and are now under General Supervision 178	22
Total under Dispensary treatment on January 1st, 1916 200	5
Total number of notified cases under observation at the end of the year 1915	1460

Comparison with 1914 shows that there were 8 more new cases in 1915. In other words, the number of new patients treated has remained about the same as in the year previously.

The number of visits paid by patients to the Dispensary was 13,719, or 529 more visits than in 1914.

The number of consultations at the patients' homes between the Tuberculosis Officer and the private practitioner was 61.

DIAGNOSIS.

All cases coming under the Municipal Scheme are thoroughly examined by Physical and X-ray methods, and also, in instances presenting no contra-indications, by Tuber-culin.

The reason for this is, firstly, to determine those cases which are likely to benefit by residential treatment in the Sanatorium and to advise them accordingly; secondly, to find out those patients who will probably benefit by Tuberculin injections.

In the past, throughout England and on the Continent, considerable harm was inflicted by the injudicious exhibition of Tuberculin. Unless care is used in the selection of cases, harm may be done by giving this potent drug to those who are unable to withstand the bodily re-action it often causes. On the contrary, there are many cases in which it exerts most beneficial effects. The careful and prolonged examination and observation of new cases is the only sure way of doing justice either to the patients or to Tuberculin.

Some of the more ignorant patients are unable to carry out the instructions given them during the period of determining an exact diagnosis. In cases where no headway can be made, they are admitted into the Sanatorium, where careful and skilled supervision can be carried out. Also in cases presenting peculiar difficulties the same course is adopted.

TABLE SHOWING THE NUMBER OF DIAGNOSES MADE DURING 1915, AND THE RESULTS OBTAINED.

	Found to b	e suffering om	Found	
	Pulmonary Tuberculosis.		to be Non- Tuberculous.	Totals.
Previously notified cases	90 of whom 4 were latent	13	2	105
Sent by School Medical Officer for Diagnosis	34	I	20	55
Sent by Local Medical Practitioners for Diagnosis	100	I	29	130
House contacts Suspected cases, other than		I	4	5
house contacts	4	_	5	9
Totals	228	16	60	304

It will be seen that 130 cases were sent by local Medical Practitioners to the Dispensary Medical Officer for diagnosis. This is 13 more than in 1914. It shows that private practitioners appreciate the aid the Dispensary is able to give them, and are ready to avail themselves of that aid.

The School Medical Officer submitted 55 cases for diagnosis during 1915. Of these just over 40 per cent. were found to be non-tubercular.

Pulmonary Tuberculosis is a difficult disease to diagnose at one sitting, and many cases which seem to be highly suspicious, prove, on extended observation, to be healthy.

"Contacts" examination has, unfortunately, not been carried out. The time of the Dispensary Staff is wholly taken up in dealing with notified cases and those sent for diagnosis by practitioners.

DENTAL TREATMENT.

As the Tuberculosis Dispensary and the Clinic are situated in the same building, the Staff of the one can always help the Staff of the other in time of need.

All anæsthetics necessary in the Clinic are given by the Tuberculosis Officer, whilst Tuberculosis Nurses assist at the Clinic operations.

The School Dentist, on the other hand, undertakes any Dental treatment which may be necessary in Tuberculosis patients.

RESULTS OF SANATORIUM TREATMENT.

PULMONARY CASES.

Tables giving the results of treatment in patients suffering from Pulmonary Tuberculosis who were discharged from the Sanatorium during the year will be found on pages 51--56.

From these tables it will be seen that—

30	patients	were	admitted	in	the First	Stage	of t	he	disease.
	_		, ,		Secon	d ,,			
99	, ,	, ,	, ,	, ,	Third	,,	,	,	, ,

In 37 patients the disease was of comparatively short duration; 44 were advanced, but showed prospects of considerable improvement and, perhaps, a return to working capacity; 51 were considered to be permanently incapable of work; and 22 were thought not to be likely to live longer than 6 months.

On discharge, in 11 cases the disease was arrested; 73 showed much improvement and had prospects of ultimate arrest under Dispensary treatment; 34 were improved; 17 showed no change; 8 were worse; and 11 died in the Sanatorium.

As regards working capacity on leaving the Sanatorium, 24 showed no impairment, 43 showed slight impairment; 31 were incapable of heavy work, but could do light labour; 31 were incapable of work of any kind; and in 14 the outlook was considered hopeless.

Non-Pulmonary Cases.

Six cases received treatment in the Sanatorium; 2 were cured, 3 greatly improved, and 1 improved. Three patients were admitted who were afterwards found to be non-tubercular; 1 died from Carcinoma of the Larynx and 2 were removed to Hospital.

RESULTS OF TREATMENT IN PATIENTS DISCHARGED FROM THE MUNICIPAL SCHEME DURING 1915.

PULMONARY CASES.

Treatment was concluded under the Scheme in 193 cases during the year. When these patients first came under observation 83 were in the First Stage, 35 were in the Second Stage, and 75 in the Third Stage.

Eighty-one of these cases were of recent onset; 57 were advanced, but showed prospects of considerable improvement, with a fair average of them returning to work; 39 were very advanced, and with no prospects of a return of working capacity; whilst 18 were expected to die within six months.

On completion of treatment under the Corporation the disease was arrested in 86 cases, 43 patients showed great improvement, 23 were improved, there was no change in 22, and 19 became worse.

Ninety-nine were able to return to full work, 21 could undertake light work, 15 showed considerable loss of working capacity, 41 were unable to work, and in 20 death was expected before the expiration of six months.

Non-Pulmonary Cases.

Nineteen cases completed treatment during the year; were cured and 2 considerably improved.

TABULATED RESULTS OF TREATMENT IN PULMONARY CASES

The tables which are appended show the results of treatment in those patients who were discharged from the Borough Sanatorium during the year 1915. A separate set of tables show the results for those patients who were discharged from active treatment under the Municipal Scheme during the same period.

The patients have been placed in two groups, and show in separate tables, those with:—

- (A) Tubercle Bacilli found in sputum.
- (B) Tubercle Bacilli not found in sputum.

The patients in each group have been classified as to the stage of the disease at the time of coming under treatment; males and females being shown separately. The classification adopted being the Turban-Gerhardt (Imperial Board of Health). They have further been classified according to the method adopted in the Astor Report.

On discharge they have been classified according to their economic condition (working capacity) and also as to their physical condition.

The following are the details of the classification adopted:

- *Turban-Gerhardt Classification (Imperial Board of Health).
- STAGE I.—Disease of slight severity, limited to small areas of one lobe; that, for instance, in case of infection of both apices, does not extend beyond the spine of scapula and the clavicle, or in the case of affection of one apex, frontal, beyond the second rib.
- STAGE II.—Disease of slight severity, more extensive than I., but affecting at most the volume of one lobe; or severe disease, extending at most to the volume of one half lobe.
- STAGE III.—All cases extending beyond II., and all such with considerable cavities.

†CLASSIFICATION OF PATIENTS, ASTOR REPORT.

- (I) Cases in which the disease can be diagnosed or is strongly suspected, but in which there is no evident impairment of the working capacity.
- (2) Cases of recent onset with some impairment of the working capacity, but without marked evidence of ill-health.
- (3) Cases of recent onset with evidence of acute illness.
- (4) Cases of a longer history of illness. In some of these cases permanent arrest of the disease may be hoped for, but in the majority, restoration to full working capacity for more than a comparatively short period is not to be looked for.
- (5) Cases in which there is a permanent loss of working capacity. Many of these patients live for a considerable period in a condition of chronic ill-health.
- (6) Cases in which a fatal termination within six months is probable.

‡Economic Condition on Discharge from Treatment.

- (I) No evident impairment of working capacity.
- (2) Some impairment of working capacity.
- (3) Marked loss of working capacity.
- (4) Very marked loss of working capacity.
- (5) Very marked loss of working capacity and progress unfavourable.
- (6) Probable fatal termination within 6 months.

CANCER.

The deaths from Cancer amounted to 150 during the year. This is the highest number recorded in the Borough in any one year, and is 25 higher than the total recorded last year.

The death-rate from the disease was 1.28 per 1,000 of the population, compared with an average of 0.99 for the previous 10 years.

The number of deaths of males and females and the deathrate from this disease of residents of the Borough since 1905 is

appended:

		Males.	Females*	Total.	Death Rate.

Of these deaths 18 were males and 16 females.

The operation of Tracheotomy was performed in 7 cases, of which 3 died.

SCARLET FEVER.

Of the 338 cases admitted, 8 were found not to be suffering from the disease, and were diagnosed thus: Measles, 5; Sunburn, 3.

Four cases were sent in to the hospital as Diphtheria, and were found to be Scarlet Fever.

Operations for the removal of Tonsils and Adenoids were performed on 6 cases, or 1.8 per cent. of the total number of cases admitted.

The number of cases suffering with purulent nasal discharge was 53, and with purulent ear discharge 16.

ENTERIC FEVER.

OUTBATHING STATION AND AMBULANCE SHED, AND DISINFECTOR, WEST QUAY.

These premises are used for the purpose of disinfection and bathing of persons who have been in contact with infectious disease, particularly for contacts of cases of infectious disease landed by vessels arriving in the Port.

The buildings also contain an observation ward for suspicious cases of sickness arriving in the Port, and the premises are further used as a discharge block in connection with the Hospital Ship.

The following is a list of the contacts and the discharged cases from the Hospital Ship bathed and disinfected at West Quay during the year:—

Enteric Fever contact	 	 I
Scarlet Fever contacts		 74
Measles contacts	 	 9
Chicken Pox contacts	 	 9
Verminous cases	 	 13
Scabies cases	 	 30

Owing to the School Clinic now being open to receive cases no children were treated at West Quay in connection with the Medical Inspection of School Children.

A large increase in the amount of disinfection work was done at the Disinfecting Station at West Quay during the year, owing to the disinfection of bedding, etc., being undertaken for the Admiralty and Military Authorities.

Over 325,730 articles were disinfected during the year, being an increase of 213,081, compared with 1914, and on many occasions it was necessary to keep both of the Steam Disinfectors working day and night.

The following is a list of articles disinfected in the Steam Disinfector at West Quay, including articles removed from the Port:—

Beds and M	Iattress		• • •	• • •	21,079

MIDWIVES ACT, 1902.

The number of Midwives who notified their intention of practising in the Borough during the year amounted to 33, a decrease of 6, compared with 1914.

One of the Midwives resides outside the Borough, but occasionally attends cases inside the boundary.

Nineteen of the Midwives were trained nurses, having obtained their certificates by reason of passing an examination in Midwifery, the remaining 14 were untrained, having obtained certificates owing to their having been in practice one year before the passing of the Act.

The number of women in childbirth who were delivered by Midwives during the year amounted to 2,004, of which 1,938 were live births and 66 still births. The total number of births registered during the same period was 2,707, the percentage of live births attended by Midwives was, therefore, 71.6.

The following table shows the percentage of women in childbirth attended by Midwives and the percentage of still births to total births attended during the last 6 years:—

Year.	Number of Live Births Registered.	Number of Live Births attended by Midwives.	Number of Still Births attended by Midwives.	Percentage of Live Births attended by Mid- wives to Births registered during same period.	Percentage of Still Births among Births attended by M dwives.
1910	2926	1960	58	67.0	2.9
1911	2849	1973	63	69.4	3.1
1912	2806	1996	65	71.1	3.2
1913	2957	2023	56	68.4	2.7
1914	2949	2008	70	68.1	3.4

					55

Inspections were made during the year at the residences of the Midwives for inspection of registers, bags and appliances. As a rule these were found in good order; notice to comply with the Rules of the Central Midwives' Board was given in those cases in which neglect was found.

As in previous years lectures were occasionally given to Midwives in the Borough by members of the Medical Staff of the Health Department in connection with the Midwives' Association.

Four cases of Puerperal Fever were notified, being equal to a rate of 0.04 per 1,000 of the population, which compares favourably with the rate of 0.06 for England and Wales, and 0.08 for the County Boroughs of England.

The particulars of the cases notified and deaths occurring from Puerperal Septicæmia during the year were:—

January 18th.—A.L.Le.E., Bullar Street, aged 31 years. The birth occurred on January 9th and was attended by a trained nurse. The patient was taken ill January 14th, when medical help was requisitioned, and the case was removed to the Parish Infirmary January 16th. Recovered.

May 3rd.—E.L., Craven Street, aged 34 years. The patient was delivered by an old, untrained Midwife on 10th April. On April 20th, after the Midwife had ceased attendance, the patient, being unwell, called in a medical practitioner, who notified the case as Puerperal Septicæmia on May 3rd. Died.

May 8th.—J.D., Cosens Court, aged 35 years. The birth occurred on the 4th May, and was attended by an old, untrained Midwife. Medical help was requisitioned on May 8th, and the patient removed to the Parish Infirmary on the same date. Recovered.

June 2nd.—K.E.F., Edward Road, aged 30 years, was delivered of a still born child on May 30th by a medical man. The patient died a few hours afterwards.

August 31st.—M.D., Cook Street. Medical man in attendance at birth. Recovered.

In all of the above cases the Midwives and Nusres were given a disinfecting bath at the Isolation Hospital on ceasing attendance on the patient, and thorough disinfection of all articles likely to convey infection was carried out.

POLLUTED WELLS.

Three samples of water were taken and submitted to the Public Analyst. The same were found on analysis to be polluted and unfit for drinking or domestic purposes.

Notices were served on the owners of the premises on which the wells were situated to provide a proper supply of water to their houses.

OFFENSIVE TRADES.

The following offensive trades are carried on in the Borough: Gut Scraper 1, Tallow Melter 1, Tripe Boiler 1, Dealers in Rags, Bones, etc., 7, Fish Friers 25.

The premises are regularly inspected and were found during the past year generally in a satisfactory condition.

Proceedings were taken for an effluvium nuisance, the defendant being find 40/-.

SLAUCHTERHOUSES.

There are 34 Slaughterhouses in the Borough, 33 of which are in use.

Two thousand seven hundred and thirty-eight visits were made, and the premises generally were kept in a satisfactory condition.

DAIRIES, COWSHEDS, AND MILKSHOPS ORDER, 1885-1886.

There are 223 purveyors of milk, including 8 cowkeepers, registered in the Borough. The total also includes 16 purveyors of milk who reside outside the Borough. During the year 4 purveyors of milk have ceased to sell milk, and their names have been removed from the Register.

One cowkeeper has been registered in accordance with

the above orders.

One application for registration has been received from a purveyor of milk residing outside of the Borough. The cleansing of dairies, cowsheds, and milkshops has been carried out in accordance with the Regulations, and various nuisances abated.

FOOD AND DRUGS ACT.

Four hundred and forty-five samples were taken by the Inspectors during the year and submitted to the Public Analyst.

One hundred and forty-four were formally purchased in accordance with the Act and 301 were informal or test samples, So of the latter being milk samples.

Twenty-five, including 10 informal samples, were found to be adulterated.

Proceedings were taken in twelve cases, convictions being obtained in ten, one being dismissed, and the other withdrawn.

	AF	RTICLE.		Number of Samples.	Genuine.	Adulterated.

THE PUBLIC HEALTH (MILK AND CREAM) RECULATIONS, 1913.

The following are particulars of work carried out under the above Regulations during the year 1915:—

1. Milk; and Cream not sold as Preserved Cream.

		(a)	(b)
		Number of samples	Number in which
		examined for	a preservative
		the presence of a	was reported to
		preservative.	be present.
Milk	• • •	200	Nil
Cream		3	3

The nature of the preservative in each case in column (b) was Boric Acid. Two were test samples. Of subsequent samples taken one was labelled Preserved Cream and one was Preserved Cream unlabelled, a warning letter being sent in the latter instance.

- 2. Cream sold as Preserved Cream.
 - (a) Instances in which samples have been submitted for analysis to ascertain if the statements on the label as to preservatives were correct:—
 - (i) Correct statements made 10
 - (ii) Statements incorrect ... Nil

10

- (b) Determinations made of milk fat in cream sold as preserved cream:—
 - (i) Above 35 per cent. ... 10
 - (ii) Below 35 per cent. ... Nil

IC

- (c) Instances where (apart from analysis) the requirements as to the labelling or declaration of Preserved Cream in Article V. (1) and the proviso in Article V. (2) of the Regulations have not be observed. Nil.
- (d) Particulars of each case in which the Regulations have not been complied with, and action taken. Nil.
- 3. Thickening Substances.—Any evidence of their additions to cream or preserved cream. Action taken where found. Nil.

REMARKS.--The Boric Acid preservative varied from .15 to .48 per cent.

HOUSES LET IN LODGINGS.

There are 40 houses in the Borough registered under the Bye-Laws relating to Houses Let in Lodgings.

Of this number six were placed upon the Register during the year, on application being made to the Local Authority.

Three hundred and seventy-seven visits were made, and the houses generally were kept in conformity with the Bye-Laws.

COMMON LODGING HOUSES.

There are 16 common lodging houses in the Borough, with a registered accommodation for 552 persons.

Applications for the registration of all houses were made previous to the 31st December by the registered keepers in accordance with the provisions of the Southampton Corporation Act, 1910.

One thousand one hundred and thirty-five visits were made during the year, and the premises generally were kept in a satisfactory condition.

HOUSING, TOWN PLANNING, &c., ACT., 1909.

During the year 732 houses were inspected under the provisions of the above Act.

The following is a list of Roads, Streets, etc., in which systematic inspection was continued, the number of houses inspected, and the number of notices served.

79

Total	34	

NOTIFICATIONS SENT TO H.M. FACTORY INSPECTOR.

Twenty-two notifications have been forwarded to H.M. Factory Inspector during the year respecting new workshops, change of address, or infringement of the Factory and Workshops Act.

HOME WORK.

During February 52 lists were sent in containing names and addresses of 146 outworkers, and during August 52 lists containing names and addresses of 153 outworkers.

They are situated as follows:—

					February.	August.
Town District	• • • • •	* * *	• • •	• • •	97	IOI
Northam and Chapel .	• • • • •	• • •			9	6
Bevois Town, Portswoo	od and St	Denys	* * *	• • •	20	23
Freemantle and Shirley	<i>7</i>			. • •	15	17
Outside District .		• • •		• • •	5	6
,	Totals	* • •		• • •	146	153

Of the 153 names received in August, 43 occupy premises registered as workshops employing labour, and of the remainder residing in the Borough 83 carry on tailoring work, 6 bootmaking, and 15 upholstery needlework, underwear, etc.

The names and addresses of the outworkers living outside the Borough have, in accordance with Section 107 of the Factory and Workshops Act, been forwarded to the Authorities of the District in which they reside.

Two hundred and eighteen visits of inspection have been made during the year to outworkers' premises, resulting in the detection and abatement of four nuisances, as follows:—

 lime-washed ventilated	• • •	 3 I
Total		 4

Seven letters of warning were sent to firms for failing to send in their lists.

BAKEHOUSES.

There are 125 Bakehouses on the Register, 19 being factories (i.e., using mechanical power) and 106 workshops.

Ninety of these were in use at the end of the year, and thirty-five were unoccupied.

They give employment to 326 men and 10 women.

Five hundred and fifty-eight visits of inspection have been made during the year and 10 nuisances abated.

All occupied Bakehouses were re-limewashed during the months of April and October, in accordance with the Regulations.

One Bakehouse has been demolished during the year, viz.: No. 133, Earl's Road, and one new one erected at No. 153, High Street.

CASES OF INFECTIOUS DISEASE OCCURRING IN HOMES OF EMPLOYEES OF FACTORIES AND WORKSHOPS.

Thirteen cases of Scarlet Fever, seven cases of Diphtheria, and one case of Cerebro-Spinal Fever occurred in homes of employees of Factories or Workshops during the year.

Fifteen of these cases were removed to the Isolation Hospital and six were isolated at home.

All premises in which cases occurred were disinfected, and bedding, etc., removed for disinfection after removal of patients to the Hospital, or on recovery when isolated at home.

The workers living in the houses in which Scarlet Fever cases occurred received a disinfecting bath and had their clothes disinfected before resuming duties.

The five following tables are inserted by request of the Secretary of State.

FACTORIES, WORKSHOPS, WORKPLACES AND HOMEWORK.

1.—INSPECTION OF FACTORIES, WORKSHOPS AND WORKPLACES.

SYNOPSIS OF TABLES-

- TABLE 1.—Showing births and birth-rates for the whole Borough and various Districts for eleven years, 1905-1915.
 - 2.—Showing deaths and death-rates for the whole Borough and various Districts for eleven years, 1905-1915.
 - 3.—Deaths from all causes at subjoined ages in the Borough of Southampton, from 1906-1915.
 - ., 4.—Causes of death in Southampton for ten years, 1906-1915.
 - ,, 5.—Showing population, birth-rates, death-rates, zymotic death-rates, infantile mortality, and marriage rates in Southampton and England and Wales for twenty years, 1896-1915.
 - 7, 6.—Table prepared in accordance with Local Government Board's instructions. Showing population, births, and deaths for ten years.
 - 7.—Ditto. Showing cases of infectious diseases notified during 1915, classified according to ages and localities, and the number removed to Hospital.
 - , 8.—Ditto. Showing deaths occurring in 1915. Classified according to diseases and ages.
 - ,, 9.—Causes of deaths in Municipal Wards during the year 1915.
 - ,, io.—Showing in detail causes of, and ages of all deaths of persons belonging to the Borough of Southampton during the year 1915.
 - " II.—Vaccination returns for the Borough.
 - Office, Southampton, during the year 1915, together with averages for ten years.

Analyst's Department.

Sale of Food and Drugs Acts, 1875 to 1899, and General Analyses.

ANNUAL REPORT

For the Year ending December 31st, 1915.

To the Worshipful the Mayor, Aldermen and Councillors of the County Borough of Southampton.

GENTLEMEN,

I have the honour to submit for your information a summary of the work done in this Department during the past year.

Section 1.—Sale of Food and Drugs Acts.

The number of samples submitted under the above Acts during the year 1915 was 522, or 23 more than in the previous year.

Of this number 445 were submitted by Inspectors, 35 by residents in the Borough, 21 by residents outside the Borough, and 21 by the Borough of Newbury.

In the following tables the samples received from outside the Berough and from the Borough of Newbury are not included.

The character of the samples, the number of each article submitted and the percentage of Adulterated Samples are given in Table I.

TABLE I.

	Nan	me of a	Article.		Number on Register.	Number of Samples Adulterated.	Percentage Adulterated Samples.
Butter		•••	•••	• • •	III	II	9.9
Cheese		•••	• • •	• • •	35	•••	_
Coffee		•••	• • •	• • •	5	I	20.0
Cream		•••		• • •	13	I	7.69,
Flour		•••	• • • · ·	• • •	16	•••	
Ginger		• • •	• • •	• • •	5	• • •	
Honey		• • •	• • •	• • •	I	• • •	
Lard			• • •	• • •	31	• • •	
Margarin	е	• • •	• • •	••	24	3	12.50
Milk		• • •	• • •	• • •	217	17	7.83
Pepper		* • •		• • •	16	•••	_
Rice		• • •	• • •	•••	5	• • •	
Rum		• • •	•••	• • •	ī	•••	
	Totals	•••	•••	• • •	480	33	6.87

The adulterated samples, amount of adulteration, prosecutions, and results are given in Table II.

TABLE II.

[.] The total fines and costs for the year amounted to \pounds 26 14s. 6d.

COMPOSITION OF MILK SUPPLY.

The composition of genuine samples for the past seven years is given in Table III, the figures being the average for the year.

TABLE III.

Year	. 19	09.	19	10.	19	11.	19	12.	19	13.	19.	14.	191	15.
Source .	Inspectors	Private												
Total Solid	s 12.73	12.74	12.61	12.62	12.48	12.61	12.48	12.54	12.62	13.19	12.53	12.74	12.43	12.88
Fat	3.82		3.71	3.76	3.72	3.77	3.63	3.64	3.71	4.33	3.66	3.73	3.58	3.90

The general averages for the past seven years were:--

	1909	1910	1911	1912	1913	1914	1915
Total Solids	 12.73%	12.61%	12.49%	12.48%	12.73%	12.54%	12.47%
Fat	 3.82%	3.75%	3.73%	3.63%	3.83%	3.83%	3.61%

The general averages of the supply for 1915, shown above, is 12.47 per cent. of total solids and 3.61 per cent. of fat.

The quality of the milk supply for the previous year (1914) was low, but the quality of the supply for 1915 is still lower.

This is due to the fact that special attention has been paid to those purveyors whose supplies have habitually been slightly below, or close upon the limit.

In one case a string of witnesses were put in the box, and each swore that the sample had not been tampered with.

Information which, if correct, would account for the deficiency in fat, but would clearly be adulteration, was subsequently obtained.

The statement was that a number of calves were being reared and that the cows were only partially milked, and the calves allowed to feed on what was left in the cows' udders.

In another case the defendant pleaded warranty, but the decuments in which he relied were shown to be faulty, and he was convicted.

REMAINING ARTICLES.

These present no features of interest or require comment.

SUPPLEMENTARY REPORT.

Public Health (First Series, Unsound Food) Acts.

At the request of the Local Government Board these articles are dealt with separately.

The number of articles received under these Regulations was 18, namely:—

Beef Lard 1
Butter 17

BEEF LARD.

This consisted of a mixture of fats and contained a large proportion of cotton seed oil.

The name is totally misleading.

BUTTER.

These are samples arriving at the Port from Foreign sources.

Two samples from Siberia were free from boric acid preservatives.

Ten samples contained boric acid, ranging from 0.13 per cent. to 0.5 per cent.

Five samples contained horic acid in excess of 0.5 per cent., the quantities ranging from 0.53 to 1.1 per cent.

RAG FLOCK ACT.

Thirteen samples of Rag Flock were submitted, and they all complied with the requirements of the Act.

SECTION II.—CENERAL.

The samples received were:—

Borough Engineer's	Depart	tment	• • •	2
Medical Officer's	,	,		IOI
	• • •	• • •		5
Private	• • •	• • •	• • •	34
Water for hardness	• • •	* * *	• • •	1,079
	Total			Ι,22Ι

BOROUGH ENGINEER'S DEPARTMENT.

The two articles submitted were samples of disinfectants supplied by contract, and one sample was not according to specification.

MEDICAL OFFICER'S DEPARTMENT.

These were all samples of water.

The water from the Corporation Works at Otterbourne, the South Hants Company's Works at Timsbury and Twyford, has been of the highest standard of purity on all occasions.

The water from the wells has been reported upon to the Medical Officer.

POLICE.

The work for the police was of a special character, requiring the determination and constitution of two liquids, and required the attendance of the Analyst at the Police Court.

PRIVATE.

The articles and other duties for private sources were:-

Beer	• • •					2
Boiler scal	1	* * *			• • •	I
Carnauba				• • •	• • •	I

Water				• • •		8
						34
						34

WATER FOR HARDNESS.

The softening for the year has been very much less than in previous years, being suspended for the greater part of the year at Otterbourne, and to a much less extent by the South Hants Waterworks Co., at Twyford and Timsbury.

SUMMARY OF HARDNESS FOR THE YEAR. 1915.

A		Hardness.						
Source.	Highest.	Lowest.	Average.
